RE: Ambient Air Sampling at the Perimeter of the Toledo Tie Treatment Site
KMC001.100.0036

Dear Ms. Feng:

Per our discussion, on February 4, 1999, Kerr-McGee Chemical, LLC requested that the frequency of perimeter air sampling be reduced from daily to twice a week based on the analytical results obtained over a two week work period and the projected completion date of sediment removal activities (approximately three weeks).

However, based on your professional judgement and experience, you felt that it would be better if perimeter air sampling were conducted three times a week or every other day to be conservative. Kerr-McGee has agreed to this and will implement the change effective February 4, 1999.

Thank you for your continued assistance with this matter and as additional data are obtained, the results will be forwarded to the Ohio Department of Health for further assessment and review. I trust this is consistent with our conversation. If you have any questions or comments regarding this matter, please feel free to contact me at (419) 385-2018.

Sincerely,

Gary D. Lescallett
Environmental Health & Safety Coordinator
